

Step 3 Select the pre-drilled stringer D (see line art). Drop one set over each post. Notch must settle onto the 2 x 6 cross brace on both sides. Attach to posts with 4 lag bolts on pre-drilled holes (two each side). Repeat for other end.

Stringer D

Step 4 Square arbor to bench all around. Use remaining lag bolts (8) to attach through side and corner of bench to post.

Step 5 Place the remaining sets of stringers on top in similar manner as D. Space evenly.

Step 6 Place 1 x 2 x 8' pieces on edge on top. Across the stringers (90°). Place one 6' outside the 4 x 4 post and one 6" inside the 4 x 4 post. Fasten with screws provided. This is when you really need the ladder. Pieces must be on edge to work for hanging baskets.

Arbor can be used to support: signage, lighting, shade cloth, sprinkler systems, hanging baskets and hooks for large baskets.
